

[Anne Arundel County West Nursery Road Transportation Facility Planning Study](#)

ATCS is currently conducting a study that identifies up to three alternatives and typical roadway sections to accommodate the future traffic growth within the study corridor under 2030 conditions. Various work tasks include: developing SYNCHRO models to evaluate/optimize the existing and 2030 traffic operations; evaluation of pedestrian and bicycle level of service; performing traffic analyses for various alternative scenarios; preparation of the preliminary engineering plans for the Preferred alternative including roadway sections, sidewalk, shared use path, and/or on street bicycle accommodations; and develop cost estimates.
