

[Northern Virginia District-Wide Maintenance Inspection Contract](#)

Since 1999, ATCS has provided inspection services for interstate, primary and secondary maintenance projects throughout the District.

Under this three-year contract with the Virginia Department of Transportation (VDOT), ATCS, P.L.C., is leading an experienced multidisciplinary team in providing construction management and inspection services for all highway and road maintenance construction projects throughout the Northern Virginia District. This project is built around the following four functional areas: (1) pavement overlay and scheduling; (2) curb and gutter and special projects; (3) bridge inspection; and (4) support services.

ATCS has provided over 20 inspectors each year to assist with milling and paving operations, curb and gutter operations, guardrail, bridge joints, bridge washing, loops inspection, and special projects such as traffic signal structural evaluation. Our VDOT performance evaluations have averaged over 3.75 for the existing contract. VDOT managers have consistently evaluated our inspectors as above average. This has been proven by our success in obtaining re-compete VDOT contracts in the Northern Virginia Districts.

Project work includes various assignments such as the following:

- Guard rail
- Concrete/asphalt patching
- Slope repairs
- Bridge joints and overlays
- Milling and paving
- Slurry seal
- Trenching
- Sidewalk and curb/gutter
- Traffic signals, pavement markings and signs
