

### Town of Vienna Traffic Calming Plan

ATCS was responsible for developing a Town-wide Traffic Calming Plan. Components of the plan included extensive data collection/traffic counts, public outreach, origin/destination studies, analyses, and recommendations to the Town Council. The analyses and recommendations addressed speed and volume (cut-through traffic) concerns on residential streets throughout the Town. ATCS staff produced (1) GIS-based maps displaying volumes and speeds; (2) recommendations for engineering (physical devices and access restrictions), speed enforcement, and driver education actions to mitigate the problems; (3) cost estimates for physical improvements; and (4) a summary report of the tasks completed for the Town.
